

# Communication is Critical

TO YOUR BUSINESS SECURITY SYSTEM

## FEATURES YOU CAN DEPEND ON

### AUTO ARMING

Automatically schedule arming and disarming of individual areas in your facility with this feature giving you the confidence that your system is armed nightly.

### RED-ILLUMINATED KEYPAD

Most systems automatically reset after an alarm has been tripped. Yours will illuminate red until YOU reset it. If you arrive at the office and see red, you know there was trouble – and that the intruder could still be inside.

### CODELESS ENTRY

Instead of entering a code on the keypad, just wave your proximity key next to the keypad to turn the system on or off.

### AREA ARMING

This allows areas within your company to be armed separately, such as an IT area or warehouse that may have different arming times.

### LOCKDOWN

The XR Series allows all public doors and Z-wave locks to lock by pressing “Lockdown.”

## Constantly Connected

No matter where you are, you can interact with others via a variety of communication platforms from an unlimited number of sources.

By taking advantage of cellular, network, and other communication links, we are able to provide businesses with increased security, added convenience, and a constantly growing list of useful features.

## Your Silent Sentry

Smart business owners create a vastly increased level of security by having their system monitored. When there's an alarm, the system automatically alerts our monitoring center so we can instantly dispatch appropriate emergency responders.

Having your alarm system monitored 24/7 by our operators offers peace of mind. Your system will alert our monitoring center of any system triggered alarms whether medical, duress, panic, fire, or burglary. In the event of an emergency, responders will be notified.

## Communication Options

When selecting your security system, one of the most important considerations is availability of needed communication links, and the flexibility to add or select different links in the future. You have three options for connecting your system to our monitoring center.

**DIAL-UP PHONE LINES** were once the only way to connect to a monitoring center, but dial-up is probably the least secure communication link because phone lines may be downed by weather or cut by intruders.

**NETWORK** (Internet) connections provide much higher communication speeds than dial-up and also enable a range of new features. With a network connection, you can remotely access your system and receive alerts/alarms via e-mail.

**CELLULAR** is emerging as the most reliable and capable connection. Your cellular connection can't be accidentally or intentionally cut, and cellular opens the door to an incredible assortment of mobile security features.

## Total Mobile Control

Include a cellular connection for your security system, and you open the door to many options for mobile control.

The **Virtual Keypad™** app works on your smartphone or mobile device. Download the app, and you can access all of the most commonly used security system functions via an attractive graphic interface.

## Control Your Business

A cellular connection to your security system also makes it possible to add a variety of remote control features. Add the optional Z-Wave® interface and inexpensive control devices, and you can use your smartphone or mobile device to:

- ✓ Remotely turn lights, signs, electronic equipment, and other plug-in devices on or off.
- ✓ Adjust thermostats, so you can set the temperature back after hours and then adjust it to a comfortable temperature while you are on the way to work... a real energy saver.
- ✓ Lock or unlock doors, so you can let employees or service people in.
- ✓ Open or close your overhead/loading doors and check the status of doors.
- ✓ Automatically lock doors when you arm your system or use Lockdown feature.
- ✓ Automatically turn on lights when your system has been activated.

*With a cellular connection you can control your security system remotely, as well as control other devices such as locks, lights, thermostats, and cameras.*

## Features to Protect and Manage Your Business

- ✓ Combine burglary and fire protection with access control in a single system.
- ✓ Choose cellular and network communication options for added benefits.
- ✓ Know what's happening at your business with alerts when staff arrive and leave and reports of traffic counts and Early to Close/Late to Open.
- ✓ Easy operation ensures your system will be used by employees with fewer false alarms.

## Remote Video Access

Use the Virtual Keypad app to remotely access interior and exterior wireless IP video cameras. View the images live, record video clips, or have clips emailed to you.

*Keypad lighting illuminates red during an alarm, and remains red, so you can instantly see that an alarm has occurred while you were out.*

*Most home control features can be accessed via the touchscreen keypad and the Virtual Keypad app.*
